### DETAILED ACTION

1. This is responsive to the amendment filed 4/29/04. Claims 1-22 are pending.
2. The IDS filed 1/28/04 has been considered.
3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1, 5, 9 and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Kosuge et al. (EP 0926059A2).

A. As per claims 1, 5, 9 and 14, Kosuge discloses a motor-assisted bicycle which includes a control unit for determining an assist ratio based on a comparison of a current running environment with a reference running environment such that the difference between the current and reference values are minimized (Abs.; [0059]). The current running environment is based in part on detecting operating parameters of the bicycle whereby running resistance and road gradient are taken into account [0023, 0029]. The reference running environment may be specified as zero running resistance [0031].

5. Claims 1-3, 9 and 14 are rejected under 35 U.S.C. 102(e) as being anticipated by Ooshima et al. (6,439,065).

A. As per claims 1, 9 and 14, Ooshima discloses a control unit for a motor-assisted bicycle. A micro-computer controls an assist ratio based on the characteristic curves shown in Fig. 3 (col. 8, lines 48-54) which relate variations of driving forces and running resistance caused by speed in a variety of gradients. Means are provided for detecting the current operating characteristics of the bicycle such that the running resistance coincides with the drive force (i.e., flat road running) (col. 6, lines 1-52).

B. As per claims 2 and 3, as above wherein the drive force assistance is increased at low speeds to accelerate the bicycle (Fig. 3; col. 6, lines 17-46).

6. Claims 4, 6, 7, 10, 11 and 15-22 are allowed.

7. Claims 8, 12 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. **REMARKS**

A. The claims as amended overcome the previous rejections. However, the IDS filed 1/28/04 cites a reference which is deemed to show the features set forth in claims 1, 5, 9 and 14. An updated search also turned up the patent to Ooshima which is also deemed to be highly relevant as noted above.
